* If you are a computer graphics professional or work with computer-generated imagery (CGI) in your job, Photoshop is a great tool for a number of image processing tasks, including the following: * Creating and manipulating layers and layers. * Adjusting levels, curves, and selections. * Cropping and rotating an image. * Enhancing the color and contrast of an image. * Filtering an image. * Producing simulated depth of field. * Conforming (fitting to the shape of) an image. Like other image-editing programs, Photoshop comes with bundled tutorials and other helpful reference materials; this chapter covers the basic tools and techniques with which you can start your Photoshop career. This is a good starting point if you have no Photoshop experience. Contents of this Chapter Understanding Layers The Layers Panel Applying Layers Editing Layers Creating Layers Creating a New File in Photoshop Understanding Layers A layer is just the container for a collection of editing, blending, or compositing operations that can be called upon in any order as you perform your various photo retouching tasks. Layers let you show and hide parts of the image, move, rotate, adjust the brightness or contrast, cut out parts of the image, and add or remove objects. Learn how to do all this in this chapter. The Layers Panel Photoshop uses the Layers Panel, shown in Figure 2-1, to manage your layers. It is the main tool that you use to create, edit, and modify layers. The panel's most important feature is the ability to hide and show different layers. Figure 2-1: The Layers Panel enables you to see and edit both image and layer information. To hide and show different layers, double-click the layer name in the Layers Panel to toggle them on and off (Figure 2-2). Click the Show Layer Styles icon to unhide layers that have been configured with layer style adjustments. You can also lock layers and groups so they won't move, rotate, or distort with the image when you edit it. You can drag layers from the Layers Panel and drop them on the canvas to place them in the correct order. The Layers panel appears only when you work with layers in Photoshop. How to complete a PDF form in Adobe Reader How to complete a PDF form in Adobe Reader I'm using Adobe Acrobat to create a PDF form, and I'm trying to set the default type, or destination, of the PDF so that it automatically saves it to a specific location. When I go to "File", "Export as...", "Create PDF from", and select "Text" in the dialogue box, I get the message: "The destination you specified in the default properties could not be found. Click 'OK' and try again." I can only figure that it has to do with a path that I'm not using correctly, but I can't find the proper ones to use. I've gone through countless pages on how to use Adobe PDF forms, but most of them are outdated. For example, the Acrobat 8 version, all of the following are clickable, but most of the instructions are about 9/10 years old. Also, I would love to just manually set a default location and not have to create a whole bunch of extra documents just to do it. I've tried just about everything I can think of, but I'm still not able to complete the export. Saving to a specific location To accomplish what you want, you'd have to use the following instructions for Acrobat 9 and earlier. Although Adobe Acrobat XI is now available and includes some of the features listed in the below instructions, it does not include the Save to a Specific Location feature or the "Export to PDF" action. Note: Adobe Acrobat 9 and earlier were incapable of exporting a file to the saved text file on a Windows computer. However, Acrobat 11 or later includes a Save to a specific location feature that allows you to save a file to a specific folder. Also, Adobe Acrobat XI includes the Create PDF from Text action which allows you to preview, edit, and add text to your PDF file. Open your PDF file. Under File > File Setup (accessed through the File menu), click the Edit button in the Property Manager and then the Create tab. In the Destination boxes, enter the folder on your computer that you want to save the file to. Click OK to save the page as a text file to the destination location. Hillary Clinton

Molecular cloning and sequence analysis of antifreeze proteins in *Litopenaeus vannamei*. Three kinds of antifreeze protein (AFP) genes of *Litopenaeus vannamei*, designated as LvAFP1, 2, and 3, were isolated from their hepatopancreas cDNA library and characterized by the RT-PCR and PCR analysis. Three genes were subcloned into the prokaryotic expression vector pET-30a(+) and were expressed in *Escherichia coli* BL21(DE3). Sodium dodecyl sulfate polyacrylamide gel electrophoresis (SDS-PAGE) and immunoblotting analysis indicated that three recombinant proteins were obtained. The results of the immunofluorescence assay showed that antibodies against three proteins could react with the hepatopancreatic cryoglobulins. The possible effect on ice recrystallization and thermal hysteresis of the three recombinant proteins were also studied in a quantitative assay of ice recrystallization. The values of thermal hysteresis (TH) ranged from 6.0 to 10.8%. The results indicated that all three proteins might be AFPs from *L. vannamei* and are closely related to the type I AFPs.

1. Field of the Invention The present invention relates to a method for manufacturing a semiconductor device, and a method for manufacturing a semiconductor device by using the method. In particular, the present invention relates to a technique for manufacturing a circuit.

2. Description of the Related Art As an example of a conventional method for manufacturing a semiconductor device using a plasma process, a semiconductor device manufacturing method disclosed in Patent Document 1 has been known. The semiconductor device manufacturing method in Patent Document 1 includes a first step of forming a first film for a capacitor on an insulating surface of a semiconductor substrate, and a second step of performing a first plasma process on the first film for a capacitor. Further, the semiconductor device manufacturing method in Patent Document 1 includes a third step of forming a capacitor on the first film for a capacitor, and a fourth step of performing a second plasma process on the capacitor. By repeating the first to fourth steps, the capacitors are formed in a layer structure.
