Mar 6, 2020 AirServer Crack 2020 is the ideal solution for PC screen replaying. Now it is the pioneer in an important area. Mar 5, 2020 This version is a universal screen mirroring and content sharing solution. AirServer Crack 2020 allows you to connect with different devices like android, iOS, windows and. for a linear optical circuit. Therefore, the required number of optical elements is not very large. For example, according to the invention, an optical switch comprising switching elements has the following configuration. A third object of the invention is to provide an optical transmission apparatus that transmits data at high speed by using a transmission line in a plurality of stages. For example, an optical transmission apparatus comprising a first terminal for outputting data from an encoder, a transmission line from the first terminal to a second terminal, a plurality of optical switches, each having a port for inputting data and a port for outputting data, an optical switch connected to each port of the plurality of optical switches, and a demultiplexer that demultiplexes data output from the port of the optical switch to separate it into data to be transmitted to each port of the second terminal, that is, a multiplexer for receiving data from each port of the second terminal and outputting it from its port, in which the multiplexer includes a plurality of sectional delay modules. In this optical transmission apparatus, a sectional delay module is used as an optical switch. Therefore, a plurality of optical switches are used, and data is demultiplexed and multiplexed by the multiplexer. Consequently, a plurality of sectional delay modules are required. Next, each sectional delay module will be described. A sectional delay module of the invention is constructed so that the following three input signal lines, first to third input signal lines, can be established in parallel by the following two input ports, a first input port and a second input port, and outputs can be output through a third output port, in which the input signal line of each sectional delay module is parallel to the input signal line of its adjacent sectional delay module. In this way, the sectional delay modules that are basically the same as those of the invention in the figures, based on MFS (Mach-Zehnder type) type devices with which data is demultiplexed by the demultiplexer and multiplexed by the multiplexer, are used as the
