When do you use the first one and when do you use the second? A: The primary difference is that Set-AzureRmVmssConnection can be run from any Windows-based Azure PS instance, whereas Set-AzureRmVmss command is only available from a VMSS-based instance. For example, if you wanted to run Set-AzureRmVmss on a VMSS that is configured and running in an EC2 instance, you can use the following command, but would not be able to use Set-AzureRmVmssConnection: Set-AzureRmVmss -ResourceGroupName "yourresourcegroup" -VMName "yourvmssname" -Profile "yourvmssprofile" Home security is a growing concern for many homeowners. In many areas, monthly utility bills for residential customers include charges for providing and/or enforcing home security measures. Some security systems have the ability to detect and report the occurrence of one or more events. However, the user must be home to activate and monitor the security system, and the user may have difficulty activating and monitoring the security system when away from home. Additionally, the user may be inconvenienced by the requirement that, when using a1d647c40b

We report a case of malignant ovarian tumour diagnosed in the middle trimester of pregnancy. An elective caesarean section for fetal distress was carried out at 27 weeks' gestation. The patient was admitted to the Obstetrics and Gynaecology Department for exploration and evaluation. Intraoperatively a mass was identified within the left ovary. Salpingo-oophorectomy was performed. The tumour consisted of mucinous adenocarcinoma and invaded the omentum and the bladder. Chemotherapy was started and the patient was discharged in good condition. Postoperative diagnosis was low-stage mucinous adenocarcinoma of the ovary, International Federation of Gynecology and Obstetrics stage IA. The patient is still in complete remission 4 years after surgery. A review of the literature was performed and 17 cases of malignant ovarian tumours diagnosed during pregnancy were identified.
