CD4(+)-CD8(+) thymocytes express natural cytotoxicity receptors (NCR) that possess potent killing activity towards certain cells and are critical for the control of viral infections. We demonstrate here that GATA3, a key transcription factor in the development of T cells and early-stage T-lineage progenitor cells, is also required for NCR activity. Our results show that GATA3 is abundantly expressed in early-stage thymocytes. In agreement with this high expression level of GATA3 in developing thymocytes, NCR activity is observed in immature T cells expressing high levels of GATA c9d1549cdd
